

COOPERATIVE ECONOMIC INSECT SURVEY REPORT

Glenn A. Salsbury, Survey Entomologist

Report 12, Volume 55

September 7, 2007

MIMOSA WEBWORM: Moths are still being caught in the light trap and damage to mimosa is severe on some trees in the Pittsburg area.

GARDEN WEBWORM: Large numbers of moths are being caught in the light trap. Large numbers of moths have been observed in soybean fields. Damage was noticeable but not severe in one field of soybeans in Labette Co.

WALNUT CATERPILLAR: Damage is noticeable on walnut trees all over Southeast Kansas.

STRIPED BLISTER BEETLES: Very large numbers of adults were found in one field of soybeans in Cherokee Co. near Baxter Springs. Heavy leaf feeding was observed.

PEACHTREE BORER and LESSER PEACHTREE BORER: Moths are still being caught in pheromone traps near Galena in Cherokee Co.

CRICKETS: A large number of nymphs were found in a lawn in Crawford Co.

LEAFFOLDERS: Large numbers of moths of various species are being caught in a light trap in Crawford Co.

PINE SAWYER: The last date for sawyer emergence was 25 August. No beetles have emerged since then from infested wood collected earlier.
